[The origin on why '%20' is used as a space in URLs](#)

I am interested in knowing why '%20' is used as

a space in URLs, particularly why %20 was used and why we even need it in the first place.

**URL encoding the space character: + or %20?**

As the aforementioned RFC does not include any reference of encoding spaces as +, I guess using %20 is the way to go today. For example, "%20" is the percent-encoding for the binary

[20 Foot Container House ,Yccontainerhouse Modular](#)
