

Detection of photovoltaic current leakage in battery cabinet

Overview

Certainly, the most effective method for handling current leaks in a photovoltaic system is a professional insulation test by a qualified electrician with an appropriate measurement equipment.

Based on the mechanism analysis, two types leakage current suppression methods are proposed. The first type method is proposed from the perspective of CM circuit, which is called CM circuit

Technical Information

For this purpose, during feed-in operation, the differential current (leakage current + residual current) is measured using an all-pole sensitive residual-current monitoring unit (RCMU).
