

Exceeding the maximum inverter voltage

Overview

Clipping occurs when the inverter limits the energy output to its maximum capacity, even if it receives more power from the panels. Oversizing a solar panel system can cause problems like reduced efficiency, potential system shutdowns, and a shorter lifespan for equipment.

What ends up happening, is that the inverter will no longer seek the operating voltage at maximum power, on the IV curve, but rather it will seek a point on this curve that allows it to work

Exceeding Inverter Limits

The general rule of thumb is that your inverter Max Input voltage must be greater than $V_{oc} \times 1.2$, otherwise the inverter will shut down (if you are very lucky) or fry (more likely).
