

Photovoltaic energy storage radiator flat plate

Overview

This simple, non-concentrating design intercepts solar radiation over a broad, flat area, reliably generating low to medium-temperature thermal energy. The physical anatomy of the flat plate collector is built around four primary elements engineered to maximize heat gain while.

Flat-plate and evacuated-tube solar collectors are mainly used to collect heat for space heating, domestic hot water, or cooling with an absorption chiller. In contrast to solar hot water panels, they use a circulating fluid to displace heat to a separated reservoir. The first solar thermal collector designed for building roofs was patented by William H. Goettl and called the "Solar heat collector and radiator for building roof".
