[Power Automate - Some SharePoint List Columns Not Appearing in](#)

I'm working on a Power Automate flow that updates items in a SharePoint Online list. However, I'm facing an issue where certain columns (including Person/Group fields) are not

[How do I refresh an Excel Power Query using Power Automate Online?](#)

0 I have data being pulled from a SharePoint list to an Excel file and I'm trying to use Power Automate online to create a scheduled flow that will trigger the "Refresh All" button for Power

[Power BI: excluding a visual from a slicer](#)

On the Power BI Desktop menu, select the Format menu under Visual Tools, and then select Edit interactions. You need to have the slicer selected. Only then you see the according Filter

[How to Read CSV file using Power Automate?](#)

You can retrieve the contents of the CSV file using the Get file content action in Power Automate/Microsoft Flow, and then using the Parse CSV action to transform the file contents

into a

formatDateTime in Power Automate Desktop

You are confusing Power Automate with Power Automate Desktop. The link you provide is for Power Automate, so those functions won't work in the PADesktop. There is an action named

[How much electricity can be generated by adding](#)

Calculating the potential electricity generation of a rooftop solar system involves several steps. Initially, determine the wattage of your solar

[Refresh powerBI data with additional column](#)

In Power BI Desktop, right-click on your dataset under Fields ('VoterList' in this case), and select Edit query: In Power Query Editor, select Advanced Editor: In Advanced Editor, increment

[How can I use "e" \(Euler's number\) and power operation?](#)

How can I write $1 - e^{(-value1^{2/2} * value2^{2})}$ in Python? I don't know how to use power operator and e.

[Running Python scripts in Microsoft Power Automate Cloud](#)

I use Power Automate to collect responses from a Form and send emails based on the responses. The main objective is to automate decision-making using Python to approve or reject the

[Power Query code to refer to another query \(and how buffering works\)](#)

Is this just part of the building process? Or If I have one query A that loads across the network and 5 follow up queries that refer to query A will power query / excel be reading the across
