

Principle of anti-salt spray treatment for photovoltaic bracket

Overview

Salt spray contains a large amount of chloride ions, which can easily penetrate the protective layer of a metal surface and cause an electrochemical reaction with the contact metal causing a product to fail.

[Photovoltaic bracket salt spray test time](#)

The neutral salt spray test is to expose the sample to a salt spray box and use a spray device to convert the sodium chloride solution with a mass fraction of about 5% into a salt spray for free sedimentation
