Overview

Once production hub of zinc and copper, the mine will now store renewable energy and supply it on demand to the grid. UK-based energy storage firm Gravitricity will soon begin work to convert Europe's deepest mine into the first-ever gravity-based battery.

Gravity (chemical) battery

A gravity battery is a type of energy storage device that stores gravitational energy-the

potential energy given to an object when it is raised against the force of gravity. In a common application, when renewable energy sources such as wind and solar provide more energy than is immediately required, the excess energy is used to move a mass upward against the force of gravity to generate gravitational potential energy. When customers eventually require more energy tha
