Current Capacity The largest fuel source is natural gas, accounting for just under 43% of all generation capacity. Coal, with a share of 15%, represents the second largest source of generation capacity.

Wind power in the United States

OverviewEconomicsHistoryNational trendsWind power by stateCommercialization of wind powerOffshore wind powerWind energy meteorology

In version 16.0 of the levelized cost of energy (LCOE) report published in April 2023, Lazard reports an LCOE for onshore wind between \$24 and \$75 per megawatt-hour (MWh) and the range for offshore between \$72 and \$140 per MWh. The lower end of the range (\$24/MWh) is, along with utility-scale solar photovoltaic (PV), the lowest unsubsidized LCOE. Conventional power plants range from \$39/MWh for the low end of Gas Combined Cycle up to \$221/MWh for the upper end of Gas Peaking and Nuclear pow
