

**Which phase of the power supply should the base station battery be connected to**

## Overview

---

Currently, BESS is typically connected to grids at 400V or 6kV-35kV, with transformer winding connection groups that can be selected as Dyn11 or YNd11. The D connection allows zero-sequence currents to circulate, preventing injection into the power supply system.

## Which phase of the power supply should the base station battery be
